

edg-voms-proxy-destroy

Name

`edg-voms-proxy-destroy` — destroys a VOMS proxy

Synopsis

`edg-voms-proxy-destroy` [options]

Description

The `edg-voms-proxy-destroy` is intended to be used after a proxy is no longer useful, to destroy it

Options

Options may be specified indifferently with either a "-" or "--" prefix. The options from `-help` to `-out` are present for compatibility with `grid-proxy-init`, and have the exact same meaning. The meaning of the other ones is the following.

- `-help` Displays usage
- `-version` Displays version
- `-debug` Enables extra debug output
- `-q` Quiet mode, minimal output
- `-file proxyfile` The name of the file containing the proxy, in case it is in a non-standard place.
- `-dry` Doesn't actually destroy the proxy.
- `-conf file` Read options from *file*.
